Why a Master’s in CM from BYU?

Bachelor’s vs. Master’s Degree
A Master’s Degree in Construction Management focuses on developing leaders who will manage construction companies, whereas the bachelor’s degree in Construction Management is designed to prepare students to manage projects.

Flexible Timeline
The Master’s program is a 30 credit hour program including 6 credit hours of research (thesis). Full time students can complete the degree in as little as one year. Part-time students can earn the degree in two calendar years. The degree must be completed within three years.

Experienced and Involved Faculty
Learn in a mentored environment with experienced faculty who want to help you succeed. Master’s students work one-on-one with professors researching areas relevant to the construction management industry today such as:

- Construction Technology
- Real Estate Development
- Construction Processes
- Design
- Facilities and Property Management
Succeed in the Construction Industry

Students are prepared to succeed in industry through the following classes:

- Construction Company Financial Management
- Trends and Issues in Managing Construction
- Construction Company Human Resources
- Managing Risk in Construction
- Construction Company Development
- Technology Leadership
